

## ABSTRACT OF THE DISCLOSURE

5 A plurality of ink cartridges are detachably attached to  
a cartridge holder of an inkjet printer and are aligned in  
parallel. Each ink cartridge includes a projection or a  
10 recess formed at a side of the ink cartridge that faces the  
adjacent ink cartridge. A set of the projection and the  
matching recess of each pair of adjacent ink cartridges forms  
a matching set in which the projection engages with the recess  
to position the ink cartridges with respect to each other.  
Each matching set has a different shape. Thus, when the ink  
cartridges are attached to the cartridge holder, the ink  
cartridges are connected together as aligned in a  
predetermined order.
